SUMMARY

Junior NetSuite Developer with 2+ years of hands-on practice on real client projects (hotels, accounting firms and other industries): SuiteScript 2.1 (User Event, Map/Reduce, RESTlet), SuiteQL, SuiteFlow workflows and SDF deployments, applied to order-to-cash and procure-to-pay processes such as credit control, collections and purchase approvals. Also a Full Stack Developer (React, Next.js, Node.js, SQL) with automated testing experience (Playwright, Supertest). Eager to keep learning NetSuite alongside experienced consultants. Computer Technician degree, C1 Advanced English. Seeking a remote junior NetSuite role.

SKILLS

NetSuite: SuiteScript 2.1 (User Event, Map/Reduce, RESTlet, Workflow Action), SuiteQL, N/search, N/record, N/render, N/email, N/log, SuiteFlow, Token-Based Authentication, SuiteCloud Development Framework (SDF), custom records, Script Parameters, governance optimization, business processes: order-to-cash and procure-to-pay

Languages & Web: JavaScript (ES2023+), TypeScript, Python, SQL, React, Next.js, Node.js, Express, REST APIs

Testing & Tools: Playwright, Supertest, Git/GitHub, Docker, Vercel, AWS (EC2, S3, Lambda), AI-assisted development

EXPERIENCE

Junior NetSuite Developer — GolData / NetDinamics (client projects) Feb 2024 – Present

Informal collaboration on NetSuite client projects across hotels, accounting firms and other industries.

Credit validation on Sales Orders (User Event Script)

- Built a SuiteScript 2.1 User Event Script that blocks sales orders from customers who exceed their credit limit, preventing approvals outside policy.
- Reduced governance usage by using search.lookupFields instead of record.load.
- Added a role-based bypass through Script Parameters, configurable by Finance without developer involvement.
- Added N/log logging to audit blocked orders.

Automated collections reminders (Map/Reduce)

- Automated overdue-invoice reminders with a Map/Reduce Script, replacing a manual Collections process across thousands of invoices.
- Consolidated invoices per customer into a single email generated with N/render and N/email.
- Designed idempotency with a log custom record to avoid duplicate sends on re-runs.
- Implemented error handling in the summarize stage with automatic reporting to the administrator.

E-commerce integration (RESTlet)

- Built a RESTlet to create Sales Orders and query stock in real time from the online store, using SuiteQL.
- Configured Token-Based Authentication on an integration role with minimum permissions.
- Implemented payload validation and JSON responses with consistent error codes.
- Prevented duplicate customers through upsert by externalid and documented the API contract.

Purchase Order approval workflow (SuiteFlow)

- Designed a multi-level approval workflow by amount and department, with automatic email notifications.
- Implemented automatic escalation of orders pending for more than 48 hours with a scheduled workflow trigger.
- Extended the workflow with Workflow Action Scripts to resolve approvers dynamically by hierarchy.

Migration and deployment with SDF

- Migrated legacy SuiteScript 1.0 scripts to 2.1, improving error handling and maintainability.
- Set up a SuiteCloud (SDF) project versioned in Git, with a Sandbox → code review → production flow and full change traceability.

Freelance Full Stack Developer — Pikaros Barbería 2026 – Present

- Built Pikaros Club, a loyalty web app for a two-branch barbershop: React + Vite frontend, Node.js/Express API, SQLite; hardened with Helmet, rate limiting and Zod; tested with Supertest, Playwright and axe-core.

Freelance Web Developer — Madero Realty 2026 – Present

- Built and launched maderorealty.com in 2 weeks (Next.js, React), integrating the Tokko Broker REST API to render 400+ live listings, with filters, map search and SSR/SEO optimization.

Developer & Partner — Beescend (FixBee) 2025 – Present

- Built the landing page for FixBee, a workshop-management SaaS (Next.js, React, Tailwind CSS, Vercel) and worked on the backend.

Customer Support Representative — Mera Solutions (client: Edesur) 2022

- Handled high-volume customer cases in a CRM for a large electricity distributor.

EDUCATION & CERTIFICATIONS

Computer Technician (Técnico en Computación) — Escuela Técnica N°32, San Martín · 2019 – 2023

EF SET English Certificate — 65/100, C1 Advanced · Languages: Spanish (native), English (C1)
